this book is the first volume in a new series progress in gene expression the control of gene expression is a central most topic in molecular biology as it deals with the utilization and regulation of gene information as we see huge efforts mounting all over the developed world to understand the structure and organization of several complex eukaryotic genomes in the form of gene projects and genome centers we have to remember that without understanding the basic mechanisms that govern the use of genetic information much of this effort will not be very productive fortunately however research during the past seven years on the mechanisms that control gene expression in eukaryotes has been extremely successful in generating a wealth of information on the basic strategies of transcriptional control although regulation of gene expression is exerted at many different levels much of the emphasis in this series will be on transcriptional control a future volume however will deal with other levels of regulation the progress in understanding the control of eukaryotic transcription can only be appreciated by realizing that seven years ago we did not know the primary structure of a single sequence specific transcriptional activator and those whose primary structures were available e.g. homeo domain proteins were not yet recognized to function in this capacity

this new series aims at covering the development in the field of biotechnology in the form of comprehensive illustrated and well referenced reviews with the expansion in the field of biotechnology both in industry as well as in education coupled with the increase in the number of new journals reporting new results in the field the need for a publication that is continuously providing reviews is urgent the goal of biotechnology annual review is to fill this gap reviewed topics will include biotechnology applications in medicine agriculture marine biology industry bioremediation and the environment fundamental problems dealing with enhancing the technical knowledge encountering biotechnology utilization regardless of the field of application will be emphasized other issues dealing with policy and regulation of biotechnology as well as the problems of development in developing countries as related to biotechnology will be included in the various issues the editorial board of biotechnology annual review encourages suggestions and contributions of articles from industry or from academic institutions that would constitute a comprehensive covering of a relevant topic in biotechnology proposals for contributions and or suggestions for topics for future volumes in this series should be sent to the editor professor m raafat el gewely department of biotechnology institute of medical biology university of tromsø 9037 tromsø norway tel 47 77 644654 fax 47 77 645350
